Please amend the claims as follows:

1-4. (Canceled).

5. (New) A computer program product residing on a phone embedded in a vehicle for performing a method for automatically using a service plan of a personal mobile phone over the phone embedded within the vehicle, the method comprising:

detecting the presence of the personal mobile phone;

receiving a mobile subscriber identification number from the detected phone;

sending the mobile subscriber identification number to a wireless network authority;

sending an authentication request to the personal mobile phone;

receiving a confirmation of the authentication;

sending the confirmation of the authentication to the wireless network authority;

ending communication between the personal mobile phone and the embedded phone; and

opening a communication session with the wireless network based on the sent confirmation.

- 6. (New) A computer program product residing in a phone embedded within a vehicle, the computer program product comprising:
 - a first component for detecting the presence of a personal mobile phone;
 - a second component for receiving a mobile subscriber identification number from the detected phone;
 - a third component for sending the mobile subscriber identification number to a wireless network authority;
 - a fourth component for sending an authentication request to the personal mobile phone;
 - a fifth component for receiving a confirmation of the authentication request;
 - a sixth component for sending the confirmation of the authentication request to the wireless network authority;
 - a seventh component for ending communication between the personal mobile phone and the embedded phone; and
 - an eighth component for opening a communication session with the wireless network based on the sent confirmation.
